PROFESSIONAL SUMMARY

BBA student at the University of Rajshahi, interested in **DataOps** and **AI infrastructure**. Alongside my business studies, I have worked with Python, SQL and Git, learned the basics of ETL pipelines, and I can clean and analyse data. I use Linux through WSL and am currently learning Docker. I am still learning and growing, and I am building my skills step by step.

EDUCATION

Bachelor of Business Administration (BBA) Expected 2029
University of Rajshahi, Bangladesh

TECHNICAL SKILLS

DevOps Tools	Linux (Ubuntu), Docker (learning)
Version Control	Git, GitHub
Programming	Python
Databases	SQL, MySQL, DuckDB
Data Work	Data Cleaning, Data Analysis, ETL Pipelines (basic), Data Visualization (basic)

WHAT I CAN DO

- **Clean data:** handle missing values, duplicates, inconsistent formats and incorrect types.
- **Analyse data:** explore datasets, find patterns and summarise what the data shows.
- **Visualise data (basic):** create charts with Matplotlib from data prepared using SQL queries and Python.
- **Use SQL:** write queries with window functions and CTEs in MySQL, use basic triggers, and use DuckDB for analysis.
- **Build ETL pipelines (basic):** extract data, clean and transform it, and load it into a database.
- **Learn Docker:** run applications and tools in containers; still building this skill.
- **Use Linux:** work in the Ubuntu command line (through WSL) for everyday tasks.
- **Use Git and GitHub:** track changes, push repositories to GitHub, and I have made a pull request.

CAREER INTERESTS

- **DataOps:** reliable, repeatable and well-organised data pipelines and workflows.
- **AI infrastructure:** the cloud, container and Linux foundations that AI systems run on.
